1 [Session summaries from the 17th symposium on operating systems principle \(SOSP'99\)](#) 85%

 Jay Lepreau , Eric Eide
ACM SIGOPS Operating Systems Review April 2000
Volume 34 Issue 2

2 [Flexible control of downloaded executable content](#) 85%

 Trent Jaeger , Atul Prakash , Jochen Liedtke , Nayeem Islam
ACM Transactions on Information and System Security (TISSEC) May 1999
Volume 2 Issue 2

We present a security architecture that enables system and application access control requirements to be enforced on applications composed from downloaded executable content. Downloaded executable content consists of messages downloaded from remote hosts that contain executables that run, upon receipt, on the downloading principal's machine. Unless restricted, this content can perform malicious actions, including accessing its downloading principal's private data and sending messages on th ...

3 [Fast detection of communication patterns in distributed executions](#) 84%

 Thomas Kunz , Michiel F. H. Seuren
Proceedings of the 1997 conference of the Centre for Advanced Studies on Collaborative research November 1997

Understanding distributed applications is a tedious and difficult task. Visualizations based on process-time diagrams are often used to obtain a better understanding of the execution of the application. The visualization tool we use is Poet, an event tracer developed at the University of Waterloo. However, these diagrams are often very complex and do not provide the user with the desired overview of the application. In our experience, such tools display repeated occurrences of non-trivial commun ...
